Bracket mounting rail with plug connection and Snap-lock bracket complying with DIN EN 1462

Plug-in Gutter Outlet Box Gutter
box-shaped

Pipe Branch 60° and Pipe Reducer
for pipe junctions

Cover Sleeve
revision opening with standpipe collar

The Trademark for Quality in Roof Drainage

A wide range of forms and individual applications. Half-round or box-shaped, customised designs and accessories: Boasting over 500 items, the RHEINZINK roof drainage system is the most comprehensive on the market. And available in three different finishes as well: RHEINZINK-prePATINA bright rolled develops its classical blue-grey patina during the natural weathering process. The preweathered versions RHEINZINK-prePATINA blue-grey and prePATINA graphite-grey already leave the works with a permanent finish that has all the elegance of a zinc patina that otherwise forms over time. All three impress with their aesthetic lines, varied designs, outstanding accuracy of fit and long, maintenance-free life.

All products are made of the natural material RHEINZINK. They satisfy even the most stringent quality criteria and are subject to voluntary inspection according to the QUALITY ZINC Criteria Catalogue. They also offer an exemplary life cycle assessment: RHEINZINK can be recycled 100%. Following comprehensive evaluation of its entire life cycle it was declared as an environmentally friendly building product according to DIN ISO 14025, Type III, some years ago.

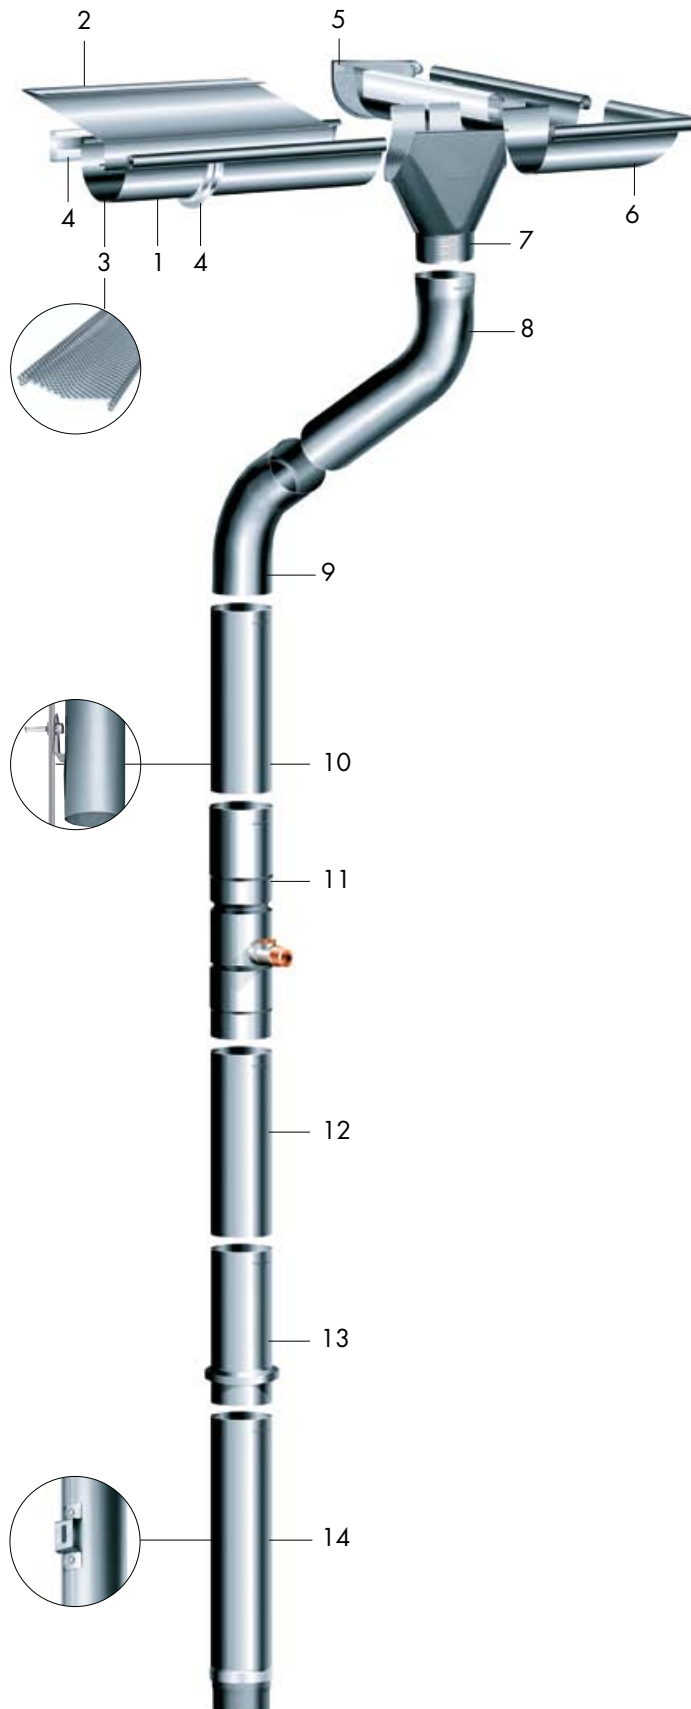

Quality Characteristics

A decision in favour of RHEINZINK is always a decision in favour of quality. As an unmistakable sign of its origin, each RHEINZINK component comes with very specific identification, which is stamped onto the product. The mark endorses the RHEINZINK quality for generations to come.

Lasting Values

The 30-year guarantee underlines the proverbial longevity of this sustainable material – so offering customers additional reliability.
